Hiring Manager

Altamira Technologies Corporation

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Software Engineer role at Altamira.

The role's framing of producing user-friendly cloud-native full-stack software for mission-critical customers maps closely onto how I've been working. At Amazon I provisioned **Infrastructure-as-Code** on **AWS CDK** (Lambda, API Gateway, DynamoDB, IAM, CloudWatch) with multi-stage, multi-region **CI/CD** and rollback controls, then shipped backend services in **Java** (Coral, Smithy, Dagger, CBOR) with low-level design patterns and unit / integration testing via **Mockito**, all under code-review discipline. The same posture, cloud-native systems with continuous integration and sustainable code, is what the JD describes.

On full-stack delivery: at NYU I shipped a customer-facing analytics platform end-to-end with **React**, **Node.js**, **REST APIs**, deployed via **Docker** on **EC2**, with Stripe billing, role-based access, and row-level security delivered to paying clients. At Campus Mesh I built scalable **Node.js microservices** backed by **MongoDB** powering real-time academic workflows. Producing software based on user-derived requirements and turning mission needs into working systems is the shape of work I've been doing.

On collaboration: I've owned features end-to-end alongside architects, product managers, and business stakeholders at PwC across the full delivery lifecycle. I'm comfortable interpreting analyst-driven requirements and translating them into production systems.

Stack-wise: **Java**, **Python**, **TypeScript** / **JavaScript**, **Angular**, **Node.js**, **PostgreSQL**, plus **AWS**, **Docker**, **Kubernetes**, and **CI/CD** pipelines. Comfortable in Linux environments and at home with mission-critical reliability constraints.

What pulls me toward Altamira is the operational seriousness of national-security work, where engineering decisions carry weight beyond product convenience and the bar for careful, documented systems is high.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
