Hiring Manager

COGENT Infotech

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Java Developer position for Recent Graduates at COGENT Infotech.

The role lines up with how I've been working. At Amazon I engineered backend services in **Java** (Coral, Smithy, Dagger, CBOR) with low-level design patterns and unit / integration testing via **Mockito**, shipped under code-review discipline. I also built a **React 18** frontend with optimized API integration, advanced filtering, and client-side caching that materially reduced page load times. The same posture, Java backends paired with a modern frontend on AWS, is the shape the JD describes.

On RESTful APIs and modern web stacks: at NYU's Novel AI Technologies I shipped a customer-facing analytics platform end-to-end with **React**, **Node.js**, **REST APIs**, deployed via **Docker** on **EC2**, with Stripe billing, role-based access, and row-level security for paying clients. At Campus Mesh I built scalable **Node.js microservices** powering real-time academic workflows backed by **MongoDB**.

On graduate fundamentals: my coursework has been weighted toward **Data Structures**, **System Design**, **Advanced Java**, **Machine Learning**, and **Big Data**. I'm comfortable with testing methodologies, version control through **Git**, and translating requirements into clean, maintainable code.

Stack-wise: **Java**, **Python**, **TypeScript**, **JavaScript**, **SQL** for languages, **React** and **Angular** for frontend, **HTML / CSS** for UI work, and **Git** for version control. Comfortable with testing frameworks and RESTful API design.

What pulls me toward COGENT is the early-career investment. Programs focused on developing recent graduates into strong full-stack engineers are exactly where I want to compound, especially with a mix of Java backend and modern frontend work that builds the breadth I'm looking to develop.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
