Hiring Manager

Diverse Lynx

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Java AWS Developer role.

The role's combination, **Java** backend work delivered on **AWS** infrastructure, is exactly what I shipped at Amazon. I engineered backend services in **Java** (Coral, Smithy, Dagger, CBOR) with low-level design patterns and unit / integration testing via **Mockito**, applied under code-review discipline. I provisioned the supporting infrastructure with **AWS CDK** (Lambda, API Gateway, DynamoDB, IAM, CloudWatch) and operated multi-stage, multi-region CI/CD with rollback controls. I also built a high-throughput, event-driven processing system on **AWS ECS Fargate**, **SQS**, **SNS** that decoupled distributed message handling under variable load.

On the broader engineering picture: at PwC I owned a distributed backend on **Microsoft Azure** integrating with **Microsoft CRM**, with event-driven processing, fault-tolerant retries over **SQL Server**, and parallelized batch ingestion that materially cut execution time. The same posture, careful service design backed by reliable cloud infrastructure, carries over to any production Java + AWS environment.

On testing and reliability: I'm comfortable navigating large codebases, debugging incidents through logs, metrics, and traces, and writing automated tests as part of the build rather than an afterthought.

Stack-wise: **Java**, **Python**, **TypeScript** / **JavaScript**, **SQL**, plus **AWS** (CDK, Lambda, API Gateway, DynamoDB, S3, IAM, CloudWatch, ECS Fargate, SQS, SNS), **Docker**, **Kubernetes**, and **CI/CD** pipelines. Comfortable with **Git** workflows and microservices design.

What pulls me toward Diverse Lynx is the operational seriousness of consulting-style delivery. Working across client engagements where the engineering has to be both production-quality and shippable on real timelines is the kind of accountability I want to keep building under.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
