Hiring Manager

Genesis10

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Entry Level Software Developer role at Genesis10.

The role's framing of bringing on early-career engineers across a broad technical foundation maps onto where I am right now. My graduate coursework has been deliberately broad. **System Design, Data Structures, Machine Learning, Deep Learning, Big Data**, and **Advanced Java** alongside Computer Architecture, while my professional work has spanned **Java, Python, TypeScript, C#/.NET**, and **C++**.

On production experience: at Amazon I engineered backend services in **Java** (Coral, Smithy, Dagger, CBOR) with low-level design patterns and unit / integration testing via **Mockito**, plus a **React 18** frontend with optimized API integration. I provisioned **Infrastructure-as-Code** on **AWS CDK** with multi-stage CI/CD and rollback controls. At PwC I owned a distributed backend on **Microsoft Azure** integrating with **Microsoft CRM** over **SQL Server**, with event-driven processing and parallelized batch ingestion. At NYU I shipped a customer-facing analytics platform on **React, Node.js, REST APIs** deployed via **Docker** on **EC2**.

On collaboration: I've shipped under code-review discipline in a small team at Amazon, partnered with product managers and architects at PwC, and worked cross-functionally with designers and stakeholders at NYU. I'm comfortable navigating large codebases, learning new tools quickly, and contributing across the stack.

Stack-wise: **Java, Python, C++, JavaScript / TypeScript, SQL, Shell scripting**, plus **Docker, Kubernetes, AWS**, and **Azure** across multiple cloud environments. Comfortable in Linux and at home debugging production incidents through logs and metrics.

What pulls me toward Genesis10 is the model. Strong early-career programs that invest in growth, with the breadth of consulting placements behind them, are exactly the environment where I'd compound the fastest, and where the work matters across many real client problems rather than one product.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
