Hiring Manager

Google

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Technical Account Manager Associate role on the Google Cloud Consulting team.

The role's combination of customer-facing technical guidance, transformation engagement management, and cross-stakeholder coordination maps closely onto my consulting-style work at PwC. I spent the past few years partnering with architects, product managers, and business stakeholders to deliver enterprise software on **Microsoft Azure**, owning features end-to-end from requirements through deployment. Translating client needs into concrete technical roadmaps, communicating across stakeholders, and managing delivery timelines is the work I've been doing.

On cloud-native technical depth: at Amazon I provisioned **Infrastructure-as-Code** on **AWS CDK** (Lambda, API Gateway, DynamoDB, IAM, CloudWatch) with multi-stage, multi-region CI/CD and rollback controls. I built a high-throughput, event-driven processing system on **AWS ECS Fargate**, **SQS**, **SNS** that decoupled distributed message handling under variable load. The same understanding carries directly to advising customers on **GCP** adoption and cloud transformation patterns.

On AI and modern data platforms: I deployed a **Retrieval-Augmented Generation (RAG)** pipeline with an **agentic workflow** at Amazon and built RAG systems on **AWS Bedrock**. I'm familiar with the modern AI and data infrastructure customers are actively evaluating, which is increasingly central to cloud-consulting engagements.

Stack-wise: **Python**, **Java**, **TypeScript / JavaScript**, plus **AWS**, **Azure**, and **GCP** familiarity. Comfortable with stakeholder communication, technical writing, and the customer-facing accountability that consulting work demands.

What pulls me toward Google Cloud Consulting is the leverage. Guiding organizations through transformations means the engineering thinking compounds across many customer environments, and learning how cloud actually gets adopted at the messy, real-world layer is rare visibility for someone earlier in their career.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
