Hiring Manager

JetBlue

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Analyst Navigation Services role at JetBlue.

The role's combination, maintaining navigation databases, conducting compliance audits, and generating operational reports across aircraft fleets, sits at the intersection of careful data engineering and structured analysis where my work has been concentrated. At PwC I spent the past few years writing complex queries, stored procedures, and parallelized batch ingestion over **SQL Server** that materially cut execution time on operational feeds. I built **Power BI** dashboards over datasets joined across multiple relational databases for business stakeholders.

On data validation and database integrity: at NYU's Novel AI Technologies I engineered **ETL pipelines** transforming **NoSQL** into **PostgreSQL** with **concurrency control and locking mechanisms**, then powered **AWS QuickSight** dashboards for real-time analytics. My Big Data graduate project built a **PySpark / HDFS** pipeline over millions of flight records with rigorous EDA and anomaly detection, exactly the kind of large-scale operational-data work that translates into the aviation context the JD describes.

On compliance and structured documentation: at PwC I owned features end-to-end alongside architects, product managers, and business stakeholders, generating audit-grade reports, documentation, and structured project handoffs. The discipline of compliance-driven enterprise delivery is the consulting craft I built my career on.

Stack-wise: **SQL**, **Python**, **PySpark**, plus **PostgreSQL**, **MySQL**, **SQL Server**, **Snowflake**, and **Power BI**, **Tableau**, **QuickSight** for visualization. Comfortable with database administration concepts, compliance reporting, and the structured workflows that regulated industries demand.

What pulls me toward JetBlue Navigation Services is the operational seriousness. FAA compliance, navigation database integrity, and audit-grade documentation run on careful, structured work where mistakes have real safety implications, and contributing to aviation operations through reliable data engineering is meaningful behind-the-scenes work.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
