Hiring Manager

King & Prince Seafood

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Business Systems Programmer role at King & Prince Seafood.

The role's combination of applications support, systems analysis, and applications development to enhance business processes maps closely onto my work at PwC. I spent the past few years on a distributed backend on **Microsoft Azure** integrating with **Microsoft CRM** over **Microsoft SQL Server**, with event-driven processing, fault-tolerant retries, and parallelized batch ingestion that materially cut execution time. The same posture, supporting and enhancing enterprise applications that real business users depend on, is what the JD describes.

On applications development and support: at PwC I owned features end-to-end alongside architects, product managers, and business stakeholders. I led code reviews, mentored engineers on software design principles, and partnered with business users to translate enhancement requests into production deliverables. I built **Power BI** dashboards over datasets joined across multiple relational databases.

On software design discipline: at Amazon I shipped backend services in **Java** with low-level design patterns and unit / integration testing through **Mockito**, all under code-review discipline. I'm comfortable across the full software development lifecycle from systems analysis through deployment and ongoing support.

Stack-wise: **C#**, **.NET**, **Java**, **Python**, **SQL**, plus **Microsoft SQL Server**, **Azure** (Function Apps, Logic Apps), and **Power BI** for the Microsoft enterprise stack. Comfortable with applications support workflows, helpdesk escalations, and the documentation work that maintains long-running business systems.

What pulls me toward King & Prince is the operational seriousness. Manufacturing and supply systems for food production run on reliable software that real operators depend on every day, where careful, documented business systems work matters more than flashy new features.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
