Hiring Manager

M.C. Dean, Inc.

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Associate Engineer 1 role at M.C. Dean.

The role's emphasis on system programming and management for large-scale networking infrastructures, plus collaboration with senior staff across departments, lines up with where I am in my career. My graduate coursework spans **System Design**, **Computer Architecture**, **Data Structures**, **Big Data**, and **Advanced Java**, the systems-and-engineering foundation that critical-infrastructure work demands.

On production system experience: at Amazon I provisioned **Infrastructure-as-Code** on **AWS CDK** (Lambda, API Gateway, DynamoDB, IAM, CloudWatch) and operated multi-stage, multi-region CI/CD with rollback controls, the same kind of system-management discipline the JD describes. I shipped backend services in **Java** (Coral, Smithy, Dagger, CBOR) with low-level design patterns and unit / integration testing through **Mockito**, all under code-review discipline.

On enterprise systems work: at PwC I owned a distributed backend on **Microsoft Azure** integrating with **Microsoft CRM** over **SQL Server**, with event-driven processing and fault-tolerant retries. I worked alongside architects, product managers, and business stakeholders across the full delivery lifecycle, generating clear status reports, documentation, and structured project handoffs.

Stack-wise: **Python**, **Java**, **C++**, **SQL**, plus **AWS**, **Azure**, **Docker**, **Kubernetes**, and Microsoft Office tools (Word, Excel) for documentation and reporting. Comfortable with systematic project documentation and structured communication.

What pulls me toward M.C. Dean is the operational seriousness of critical-facilities work. Building intelligence for infrastructure where security, performance, and reliability matter in real units is exactly the kind of accountability I want to build my career around.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
