Hiring Manager

Nordstrom

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Delivery Platform Software Engineer 1 role on the Developer Tools team.

The role's framing of building tools and platforms that enhance developer productivity sits at the same layer as the work I did at Amazon. I provisioned **Infrastructure-as-Code** on **AWS CDK** (Lambda, API Gateway, DynamoDB, IAM, CloudWatch) and operated multi-stage, multi-region **CI/CD** with rollback controls, reducing developer time to production. I shipped backend services in **Java** (Coral, Smithy, Dagger, CBOR) under code-review discipline with unit and integration testing via **Mockito**, plus a **React 18** interface for internal operator workflows. The same posture, internal-facing platform engineering that real developers depend on, is what the Developer Tools team owns.

On CI/CD and GitHub-based DevOps: I'm fluent in **Git** and GitHub workflows, **Docker** and **Kubernetes** for orchestration, and shipping under code-review and PR-driven release processes. At PwC I owned features through the entire delivery lifecycle alongside architects and product managers, working in agile delivery.

On cross-functional collaboration: I've partnered with product, design, analytics, and engineering teams across projects. At NYU's Novel AI Technologies I shipped a customer-facing analytics platform with role-based access for paying clients, working across the stack to deliver features end-to-end.

Stack-wise: **Python**, **Java**, **JavaScript / TypeScript**, **GitHub Actions**, **GitLab CI**, **Docker**, **Kubernetes**, **REST APIs**. Comfortable with monitoring, observability, and the production hygiene that platform work demands.

What pulls me toward Nordstrom Delivery Platform is the leverage. Tools that reduce friction across all of engineering compound far more than features built for any single product, and platform engineering at Nordstrom's scale touches a huge number of internal developers every day.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
