Hiring Manager

PAR Technology

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Business Analyst role at PAR Technology.

The role's combination of sprint-backlog management, requirements documentation, and ensuring engineering and design teams have what they need to ship sits at the intersection of business analysis and engineering discipline where my work has been concentrated. At PwC I spent the past few years partnering with architects, product managers, designers, and business stakeholders across the full delivery lifecycle, owning features from requirements through deployment under PwC's SDLC and quality standards.

On engineering-adjacent business analysis: I've translated ambiguous product needs into technical work that engineers can execute. At PwC I documented requirements, coordinated with delivery teams, and ensured stakeholders had clear status reporting. At NYU's Novel AI Technologies I shipped a customer-facing analytics platform end-to-end with **React, Node.js, REST APIs** for paying clients, working closely with engineers and designers across the stack.

On product delivery for mobile and integrations: PAR's restaurant technology focus on mobile apps and integrations maps onto the iOS and Android health platform I architected at NYU, which involved real-time wearable telemetry and cross-platform delivery. I'm comfortable working with engineering teams on multi-platform product work.

Stack-wise: **SQL, Python, Power BI**, plus product-management tools (Jira, Confluence), structured requirements documentation, and the cross-functional coordination that agile delivery teams need.

What pulls me toward PAR is the operational depth of restaurant technology. Powering brands worldwide through reliable POS and operations systems runs on careful, documented engineering work where small process improvements compound across thousands of restaurants.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
