Hiring Manager

Uber Advertising

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Strategy & Planning Analyst role on the Uber Advertising Strategy team.

The role's combination, building data products that support strategic decision-making across the organization, plus defining standards and tools that scale analytics work, sits where my engineering background and analytics work intersect. At PwC I spent the past few years building **Power BI** dashboards over datasets joined across multiple relational databases for business stakeholders, writing complex queries and stored procedures over **SQL Server** that materially cut runtimes on operational feeds.

On building scalable data systems: at NYU's Novel AI Technologies I engineered **ETL pipelines** transforming **NoSQL** into **PostgreSQL** with concurrency control and locking mechanisms, then powered **AWS QuickSight** dashboards for real-time analytics. My Big Data graduate project built a **PySpark / HDFS** pipeline over millions of flight records with rigorous EDA, anomaly detection, and feature engineering, the kind of operational-data infrastructure work that scales decision-support analytics.

On cross-functional coordination: I've owned features end-to-end alongside architects, product managers, and business stakeholders at PwC, translating ambiguous strategic questions into reporting and analytical deliverables that non-technical audiences can act on. Defining data standards and stewarding scalable tools across the organization is the consulting-style work I've been doing.

Stack-wise: **SQL, Python, Power BI, Tableau, QuickSight**, plus **PostgreSQL, MySQL, Snowflake**, and dashboard development. Comfortable across the data-prep-to-strategic-insight pipeline that business strategy work demands.

What pulls me toward Uber Advertising Strategy is the leverage. Strategic data products at this scale shape how the entire advertising business gets run, and building tools that compound across the organization is the kind of engineering thinking I want to keep applying.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
