

Skills

Languages: TypeScript, JavaScript (ES6), HTML5, CSS3, SQL, Java, Python

Frameworks & Libraries: Angular, RxJS, NgRx, React, Redux, Node.js, Express.js

Database: RDBMS (MySQL, PostgreSQL), NoSQL (DynamoDB, Firebase, MongoDB), Dataverse

Cloud: AWS (AWS CDK, EC2, S3, DynamoDB, API Gateway, Lambda, Cognito, IAM), Azure (OpenAI services, Security Data lakes, Storage blobs)

Tools: Git, Visual Studio, Cursor, Postman, Docker, Kubernetes, Power BI, Jest, Jasmine, Karma, React Testing Library

Experience

Campus Mesh

Jan 2026 – Present

Software Engineer

New York, NY

- Engineered reactive **Angular** components and services using **RxJS** to handle real-time academic workflows – study groups, messaging, and notifications – serving **10,000+ active users** with consistent uptime.
- Cut the initial JavaScript payload by **35%** by deferring feature module downloads to on-demand route navigation, eliminating upfront loading of pages the user may never visit and improving Time to Interactive on slow connections.
- Raised unit and integration test coverage to **85%+** using **Jest** and **Jasmine/Karma** across all feature modules, enabling weekly deployments with zero production regressions through **Git**-managed CI pipelines.

Amazon

May 2025 – Aug 2025

Software Development Engineer Intern

Seattle, WA

- Architected a **React 18** and **TypeScript** console with **OAuth 2.0** and corporate **SSO** authentication; enforced **4-tier role-based access control** governing which routes, UI panels, and actions each user could access — protecting evidence data for **500+** fulfillment team members.
- Eliminated redundant API calls by caching server responses on the client for high-traffic dashboard views; applied page-level code splitting so each route loaded only its required bundles — cutting page load speed by **40%** and improving Core Web Vitals scores.
- Maintained zero critical defects across a 3-month release cycle by writing unit and integration tests covering auth flows, role guard behavior, and data-fetching components using **Jest** and **React Testing Library**.

New York University (Novel AI Technologies, Inc.)

Aug 2024 – Present

Software Developer (On-Campus)

New York, NY

- Built a **TypeScript** and **React** frontend for an **NSF-funded (\$100K)** AI health platform, integrating real-time wearable sensor data with cloud-deployed machine learning models for iOS and Android users.
- Delivered an insurance analytics platform (**React**, **Node.js**, **REST APIs**) where brokers, underwriters, and admins each accessed role-restricted dashboards scoped to their permitted data; integrated **WebSocket** real-time updates, **responsive HTML5/CSS3** layouts, and Stripe billing — generating **\$50K+** across **6 enterprise clients**.
- Built a shared **React** component library with consistent design standards, cutting UI development time across 3 product features; coordinated **Git** branching and code review workflows across a multi-developer team.

PricewaterhouseCoopers (PwC)

Aug 2021 – Aug 2024

Senior Software Engineer

Bengaluru, India

- Designed and delivered custom **Power Apps Component Framework (PCF)** controls in **TypeScript**, **HTML5**, and **CSS3** for **Dynamics 365 CRM**, replacing out-of-box UI with accessible data interaction components across **3 enterprise** deployments.
- Built **Angular** and **TypeScript** frontends integrated with Microsoft CRM, handling asynchronous, event-driven data streams across health platform modules with reactive state management.
- Established frontend code review standards covering **HTML/CSS** accessibility, component design patterns, and test coverage; reduced production defects by **25%** and mentored **3 junior engineers**.
- Deployed an **NLP-based OCR** model on Azure, cutting data extraction time by **75%**; built **Power BI** dashboards across multiple databases, improving reporting efficiency by **40%**.

Projects

Task Management Dashboard (Angular SPA) 🌐 | *Angular, TypeScript, RxJS, NgRx, HTML5/CSS3, Jest*

- Built a single-page **Angular** application with **NgRx** for centralized state management and reactive data streams; delivered drag-and-drop task boards and real-time status updates via WebSockets.
- Achieved **90%+ test coverage** with **Jest** across components, services, and state management layers; enforced strict **TypeScript** typing and type-safe selectors throughout.

Hospital Management System (Full-Stack Web Application) | *React, TypeScript, Node.js, Express, MongoDB, AWS SageMaker*

- Developed a full-stack healthcare platform with **React** and **TypeScript**, featuring responsive **HTML5/CSS3** layouts and role-based access control to manage appointments, patient records, and lab reports.
- Fine-tuned a **Hugging Face** transformer model to **88% diagnostic accuracy** and deployed it on **AWS SageMaker**, enabling real-time condition predictions within the physician dashboard.

Education

New York University | *Master of Science in Computer Engineering (GPA – 3.9/4)*

Sep 2024 – May 2026

- Coursework:* System Design, Machine Learning, Deep Learning, Big Data, Advanced Java, Data Structures

Certifications 🌐

AWS Cloud Practitioner 🌐

Power BI Data Analyst Associate 🌐

Azure Data Fundamentals 🌐

Microsoft Developer Associate 🌐

Microsoft Solution Architect Expert 🌐

Stanford Machine Learning (Coursera) 🌐
