Hiring Manager

Intellect Solutions LLC

Dear Hiring Manager,

My name is Ajay Venkatesh — finishing my M.S. in Computer Engineering at NYU, with several years of production software experience: a few years at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. My focus has been on **full-stack web applications, Java backends, and cloud-native deployments on AWS** — the same triangle the Full Stack Developer role at Intellect Solutions describes.

The posting maps cleanly onto my background. At Amazon I built a **React 18** frontend with optimized API integration, advanced filtering, and client-side caching, paired with backend services in **Java** (Coral, Smithy, Dagger, CBOR) and unit/integration testing through **Mockito** — the same React + Java + production-grade discipline the role calls out. I provisioned the supporting infrastructure as code with **AWS CDK** (Lambda, API Gateway, DynamoDB, S3, IAM, CloudWatch) and operated multi-stage, multi-region CI/CD with rollback controls — the production-support and monitoring posture the team needs.

At NYU's Novel AI Technologies I shipped an end-to-end full-stack analytics platform on **React, Node.js, and REST APIs**, deployed via **Docker** on **EC2**, with **role-based access control** and row-level security for paying clients. I also engineered **ETL pipelines** transforming **NoSQL** data into **PostgreSQL** with concurrency control — relevant to the ETL and batch-processing familiarity the JD lists. At PwC I spent three years on a distributed Microsoft Azure backend integrating with Microsoft CRM, with event-driven processing, fault-tolerant retries, and parallelized data ingestion that cut execution from hours to minutes.

Stack-wise: **Java** (now adding **Spring Boot** to my toolkit), **React** for frontend, **Python** and **Node.js** for services, **PostgreSQL / DynamoDB** for data, and **AWS Lambda, IAM, CloudWatch, Docker** for cloud-native deployment. I'm comfortable spanning frontend, backend, and ops, partnering with product / design / QA, and reasoning about reliability and security in production systems.

What pulls me toward Intellect Solutions specifically is the operational seriousness of the work — production support, troubleshooting, defect remediation, and security-aware deployment for organizations where mistakes have real consequences. That kind of accountability is the environment I want to keep growing in.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
