Hiring Manager

STERIS

Dear Hiring Manager,

My name is Ajay Venkatesh — finishing my M.S. in Computer Engineering at NYU, with several years of production software experience: a few years at PwC in Bengaluru on a healthcare platform, a summer SDE internship at Amazon, and ongoing on-campus work at NYU’s Novel AI Technologies. My background sits at the intersection of **healthcare-domain software, applied AI/ML, and systems-level engineering** — the same triangle the STERIS Software Engineering Co-op describes.

The role’s framing fits where I’ve been pushing my work. At PwC I developed a distributed backend on **Microsoft Azure** for a health platform integrating with **Microsoft CRM**, with event-driven processing, fault-tolerant retries, and parallelized batch ingestion — enterprise-grade reliability for software where mistakes have real consequences for patient-facing workflows. I also built an **NLP-based OCR neural model** on Azure to automate structured data extraction from unstructured clinical documents. At NYU I shipped an **NSF-funded** AI-powered health platform for iOS and Android, ingesting real-time wearable telemetry and powering AI models for health metric analysis and food image processing — the same kind of connected-device software that STERIS’s healthcare and life sciences products live in.

On the AI/ML side: my graduate coursework was **Machine Learning, Deep Learning, Big Data, Computer Architecture, System Design, and Data Structures**. I’ve shipped Python ML pipelines, deployed a **Retrieval-Augmented Generation** pipeline with an **agentic workflow** at Amazon, and built RAG systems on **AWS Bedrock** with FAISS indexing. The role’s emphasis on data processing, simple model tests, and exploring emerging AI-driven technologies maps directly to the kind of work I’d want to dive into.

Stack-wise: **Python** is my daily driver for both backend and ML pipelines; **Java** is where I spent my Amazon internship (Coral, Smithy, Dagger, CBOR with Mockito for unit/integration testing); **C** and **C++** from graduate coursework and systems projects; **C# / .NET** from PwC. I’m comfortable writing unit, integration, and system tests; debugging defects from logs and traces; and updating documentation as the code evolves.

What pulls me toward STERIS is the seriousness of the work — patient care, infection prevention, sterilizers and connected devices in real hospitals. The accountability that domain demands is the kind of engineering environment I want to grow in.

I’d welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
