Hiring Manager

BeaconFire Inc.

New York, United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Java Developer role at BeaconFire Inc., where I'd contribute maintainable application code, collaborative sprint delivery, and tested features for client platforms.

At Amazon, I engineered backend services in **Java** using **Coral**, **Smithy**, **Dagger**, and **CBOR serialization**, with unit, integration, and automated system test coverage via **Mockito**. I also built a **React.js** frontend with **TypeScript** and collaborated with testers to resolve opened defects while supporting **CI/CD** releases. That work maps closely to writing secure, scalable application code for production platforms.

In my **Java desktop expense tracker** project, I applied **OOP principles**, **Collections**, **Maps**, **Lists**, and **Sets** with **JDBC** and **multithreading** for thread-safe updates. At PwC, I developed a distributed backend on **Microsoft Azure** with **SQL Server** integration, which reinforced relational query skills, code reviews, and ownership from requirements through deployment.

My stack includes **Java**, **JavaScript**, **TypeScript**, **Maven**, **HTML5**, **CSS**, **React.js**, **SQL**, **SQL Server**, **JDBC**, and **Git**. **Spring**, **Angular**, **JSP**, **J2EE**, **Weblogic**, and **Tomcat** are areas I have not shipped in production yet, but I have picked up new Java ecosystem tools quickly through coursework and project work.

What pulls me toward BeaconFire is the chance to grow as a Java developer inside a consulting team that ships software for varied clients. Based here in Brooklyn, I'd welcome contributing to hybrid delivery with your New York area team.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
