Hiring Manager

FieldAI

Irvine, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer, Test Infrastructure role at FieldAI, where I'd build automation, tooling, and pipeline integration that raises confidence in every release.

At Amazon, I developed unit, integration, and automated system test coverage with **Mockito**, integrated those tests into **multi-stage CI/CD** pipelines via **AWS CDK**, and collaborated with testers to reproduce and resolve defects. I also built an internal **React** console for debugging operational issues, which maps closely to developer-facing tools that improve signal and shorten failure analysis loops.

At CampusMesh, I ship **Python/Node.js microservices** across local through production environments on **AWS**, and at NYU I built **Python ETL pipelines** with validation checks before analytics handoff, deployed via **Docker** on **Linux**. At PwC, I led code reviews, diagnosed multi-service production incidents, and strengthened design practices on a distributed **Azure** backend.

My stack includes **Python, Java, Docker, AWS, CI/CD, Linux, Git, Mockito, unittest**, and **PostgreSQL**. Dedicated **robotics simulation** and **hardware-in-the-loop validation** are areas I have not owned end-to-end yet, but I have built testable distributed services and data pipelines where reliability and debugging discipline mattered in production.

What pulls me toward FieldAI is the chance to build test infrastructure where software is proven on real robots, real sensors, and real field deployments rather than in slides alone. I care about systems that get better every time they run in the world, and I'd welcome bringing that mindset to your Irvine team.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
