Hiring Manager

Kashable

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer role at Kashable, where I'd contribute across backend services, data pipelines, and user-facing applications for consumer lending and employee benefits platforms.

At Amazon, I engineered backend services in **Java** using **Coral**, **Smithy**, **Dagger**, and **CBOR serialization**, with **OOP design patterns**, unit and integration testing via **Mockito**, and **CI/CD** releases. I also built a **React** frontend with **TypeScript**, **REST API** integration, and **OAuth** controls for internal back-office users, which maps closely to full-stack delivery with reliable, reviewable code.

At NYU's Novel AI Technologies, I developed an insurance analytics platform with **React**, **Node.js**, **TypeScript**, and **REST APIs**, plus **ETL pipelines** from **NoSQL** into **PostgreSQL** and **Stripe billing** with **RBAC**. That work reinforced building regulated, customer-facing systems where data accuracy and operational reporting matter for business outcomes.

My stack includes **Java**, **Python**, **TypeScript**, **React**, **Node.js**, **SQL**, **PostgreSQL**, **MySQL**, **MongoDB**, **JDBC**, **Maven**, **AWS**, **Azure**, **Docker**, **Git**, **Linux**, **Cursor**, and **GitHub Copilot**. **Spring**, **Hibernate**, and **Next.js** are areas I have not shipped in production yet, but I have picked up new frameworks quickly through coursework and prior roles.

What pulls me toward Kashable is the chance to build lending and benefits software where engineering judgment directly affects sensitive financial workflows and customer outcomes in real units. I'd welcome contributing to scalable subsystems and cross-functional delivery on your team.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
