Hiring Manager

Booz Allen Hamilton

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the software engineering role at Booz Allen Hamilton, where I'd help design and enhance ground systems software and real-time capabilities that mission teams depend on.

At PwC, I modernized a legacy enterprise health platform into a **distributed microservice-style backend** on **Azure**, integrated with **SQL Server** and **Microsoft CRM**, and automated manual workflows through **NLP-based OCR** pipelines. That work maps closely to transitioning legacy components, improving operational speed, and solving complex problems in cross-functional Agile teams.

At Amazon, I engineered **Java** services in a **microservice architecture** with **Mockito** test automation and provisioned **AWS CDK** infrastructure with **CI/CD** releases. I also built **React/Node.js** tooling for real-time operational visibility. At CampusMesh, I develop **Python/Node.js microservices** for real-time messaging workflows on **Linux/AWS** with **Docker**-compatible deployments.

My stack includes **Java**, **Python**, **Go**, **JavaScript**, **React**, **Node.js**, **AWS**, **Azure**, **Docker**, **Kubernetes**, **Linux**, and **Git**. **Rust** is an area I have not shipped in production yet, but I have strong systems fundamentals across statically typed and microservice-based backends.

What pulls me toward Booz Allen is the chance to build software where performance, resilience, and precision matter because operational teams rely on it in high-stakes environments. I care about owning hard engineering challenges from architecture through deployment, and I'd welcome contributing to mission-focused systems on your team.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
