Hiring Manager

Campus

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the full-stack engineering role at Campus, where I'd build end-to-end products, conversational workflows, and operational tools that admissions, financial aid, and student success teams use every day.

At CampusMesh, I built **CampusIQ**, a **conversational AI copilot** with **RAG pipelines** and **embedding-based semantic search**, alongside **full-stack features** in **React**, **Node.js**, and **TypeScript** that replaced manual coordination with purpose-built software. I ship iteratively using **Cursor** and **AI-assisted development** workflows, which maps closely to prototyping quickly with modern coding agents and owning products end to end.

At Amazon, I deployed a **RAG agentic workflow** and a custom **Model Context Protocol (MCP) server** for tool-augmented retrieval, plus internal **React** tooling for operational teams. At NYU, I developed a **full-stack analytics platform** with **LLM-based document analysis** and **QuickSight dashboards** that automated manual underwriting steps for internal users.

My stack spans **Python**, **TypeScript**, **React**, **Node.js**, **LangChain**, **RAG**, **MCP**, **AWS**, **Docker**, and **PostgreSQL**. I use **Cursor**, **GitHub Copilot**, and **Claude**-style agent workflows daily, and I enjoy working directly with users to understand operational pain points before shipping useful software.

What pulls me toward Campus is the chance to help define how a modern engineering team uses AI to build and ship products faster while solving real problems for student-facing teams. I care about ownership, fast iteration, and software that replaces legacy manual work with tools people actually want to use.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
