Hiring Manager

Forterra

United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Application Services Software Engineer role, where I'd build internal applications, automations, and integrations that help Business and Engineering teams run more efficiently.

At PwC, I delivered internal tooling on **Microsoft Azure** and **Dynamics 365 CRM**, connecting onboarding, finance, and operations workflows over **SQL Server**. I automated repetitive processes with **Azure Logic Apps** and **Power Automate**, built **REST API** integrations validated in **Postman**, managed permissions through **Azure security groups**, and shipped changes through **Azure DevOps** in a regulated healthcare environment.

At Amazon, I built a secure internal console with **REST APIs**, **role-based access**, and **AWS CDK** infrastructure with **Git**-driven **CI/CD**, troubleshooting integration and permission issues across services. At NYU, I developed broker and analytics platforms with **RBAC**, external partner integrations, and reporting dashboards for operations stakeholders.

My stack includes **C#**, **.NET**, **SQL**, **PowerShell**, **Power Automate**, **Power BI**, **Azure**, **AWS**, **Python**, **JavaScript**, and **Git**. **M365 GCC High**, **Azure Government**, and **Blazor** are areas I have not owned end-to-end yet, but my **Power Platform** and **Azure** delivery background positions me to ramp quickly in a secure enterprise setting.

What pulls me toward Forterra is the chance to support mission-critical corporate systems behind autonomy at scale. I care about practical engineering that helps cross-functional teams move faster with maintainable code, clear documentation, and disciplined access controls in regulated environments.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
