Hiring Manager

LetsGetChecked

Remote, United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Graduate Software Engineer role on your US technology team, where I'd contribute to reviewing operational signals, narrowing down defects, and supporting feature work across product engineering and cloud-backed data environments.

In my InviLite project, I built pipelines that ingest application and system data into governed stores and paired them with retrieval workflows that help engineers investigate failures faster and surface likely root causes. That work mirrors the curiosity and analytical discipline your team needs when parsing runtime output, metrics, and ticket context before handing clear findings to engineering partners.

At Amazon, I provisioned services with **AWS CDK** and **CloudWatch**, used **application logs** and service metrics while fixing backend defects, and backed changes with **Mockito** unit and integration tests. At PwC, I supported a distributed **Azure** backend for a **health platform**, correlating logs and SQL traces during production investigations. At NYU, I've shipped **health-focused** mobile and web products and maintained concise documentation for cross-functional stakeholders.

My stack includes **Python**, **JavaScript**, **Java**, **C#**, **React**, **Node.js**, **AWS**, **Azure**, **Docker**, **PostgreSQL**, and **Git**. Dedicated **Splunk** or **Datadog** ownership is not on my resume yet, but I've worked with **CloudWatch** and operational datasets in production-like settings and pick up observability tooling quickly.

What pulls me toward LetsGetChecked is the chance to build software where careful troubleshooting and clear communication directly support people managing their health from home. Healthcare engineering rewards disciplined root-cause work and trustworthy documentation, and I'd welcome contributing to that mission on your remote US team.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
