

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: System Design, Machine Learning, Deep Learning, Big Data, Computer Architecture, Data Structures

Experience

- **CampusMesh** Jan 2026 – Present
Software Engineer
– Operated shared **AWS** platform services using **Serverless Framework** with **Lambda**, **API Gateway**, **S3**, and **CloudFront** across **4 environments** (local, dev, staging, production).
– Enforced secure cloud architecture with **least-privilege IAM**, **KMS-managed keys**, and **SSM Parameter Store**; partnered with application teams on deployment readiness and environment promotion.
– Developed scalable **Node.js microservices** backed by **MySQL (Sequelize)** and **DynamoDB** for real-time academic workflows across messaging, calls, notifications, and profile management.
- **Amazon** May 2025 – Aug 2025
Software Development Engineer Intern
– Provisioned **Infrastructure-as-Code** with **AWS CDK**, deploying API Gateway, Lambda, DynamoDB, S3, IAM, and **CloudWatch** across secure **VPC**-backed networking with routing, load balancing, and **security groups**.
– Built an event-driven platform on **AWS ECS Fargate**, **SQS**, and **SNS**, decoupling distributed processing and improving incident response latency by **50%** during peak traffic.
– Ran **multi-stage, multi-region CI/CD** through **Git**-based workflows; performed root-cause analysis on production-adjacent issues with code reviews, documentation, and operational readiness checks.
– Engineered backend services in **Java** (Coral, Smithy, Dagger, CBOR) with unit/integration testing via **Mockito**, cutting backend execution time by **35%**.
- **New York University (Novel AI Technologies, Inc.)** Aug 2024 – Present
Software Developer
– Deployed containerized services with **Docker** on **AWS EC2 (Linux/Ubuntu)**; managed networking, access controls, and runtime stability for a **React**, **Node.js**, **REST API** analytics platform.
– Built **Python ETL pipelines** transforming **NoSQL** into **PostgreSQL**; processed **250K+** records and powered **AWS QuickSight** dashboards for operational metrics and reporting.
- **PricewaterhouseCoopers (PwC)** Aug 2021 – Aug 2024
Senior Software Engineer
– Supported a distributed **Microsoft Azure** backend with event-driven processing and fault-tolerant retries; shipped changes through **Azure DevOps CI/CD** pipelines with integration monitoring and documented handoffs.
– Optimized bulk data ingestion with **parallel processing** on **100K-row** feeds, cutting execution from **5 hours to 1 hour**.

Projects

- **InviLite (Platform Automation & Reliability)** | *Python, AWS, Kinesis, Lambda, S3, Glue, DynamoDB, CloudWatch*
– Built **Python** automation for a cloud-native data pipeline (Kinesis, Lambda, S3, Glue, DynamoDB) ingesting operational telemetry into governed stores for triage and stability analysis.
– Accelerated root-cause investigation with retrieval workflows over incident records, cutting resolution time from **1–2 hours to minutes** and improving classification accuracy from **56% to 92%**.
- **Advanced Expense Tracker (Python Automation Tool)** | *Python, SQLite3, Multithreading, Linux*
– Developed a modular **Python** desktop tool with **OOP design patterns**, concurrent transaction handling, and thread-safe database access for repeatable operational workflows.

Skills

- **Programming Languages:** Python, Java, C++, TypeScript, JavaScript (ES6), SQL, Bash
- **Cloud & IaC:** AWS (EC2, VPC, IAM, CDK, Lambda, ECS Fargate, S3, DynamoDB, API Gateway, CloudWatch, SQS, SNS), Terraform, Azure
- **Platform & DevOps:** Docker, Kubernetes, Serverless Framework, CI/CD, Git, Linux (Ubuntu), Networking (DNS, load balancing, subnets, security groups)
- **Databases:** PostgreSQL, MySQL, DynamoDB, MongoDB, SQL Server
- **Tools:** Visual Studio, Postman, Jupyter, Power BI, QuickSight
