Hiring Manager

Nuro

Mountain View, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer, Offboard Infrastructure role at Nuro, where I'd contribute to data platform, technical infrastructure, or simulation-adjacent systems that support autonomous driving at commercial scale.

At CampusMesh, I develop **Python/Node.js microservices** in a **distributed architecture** backed by **MySQL** and **DynamoDB**, with **embedding-based semantic search** and data indexing that supports ingestion, retrieval, and evaluation over structured datasets. At Amazon, I provisioned **AWS CDK** infrastructure for mission-critical workflows and tuned backend performance in a **microservice architecture** with **CI/CD** releases across regions.

At NYU, I built **Python ETL/data processing pipelines** into **PostgreSQL** with **concurrency control**, plus **Docker/Linux** deployments for **ML inference** workloads. My **InviLite** project architected a large-scale **Python data platform** on **AWS** (Kinesis, Lambda, S3, Glue, DynamoDB) with governed ingestion and evaluation pipelines for structured and unstructured data.

My stack includes **Python, C++, Go, Distributed Systems, Microservices, Multithreading, AWS, Docker, Kubernetes, PostgreSQL, DynamoDB, and CI/CD**. Dedicated **robotics software frameworks, sensor simulation, and GPU/FPGA optimization** are areas I have not owned end-to-end in production yet, but I have strong systems fundamentals and have ramped quickly on large-scale data and cloud infrastructure before.

What pulls me toward Nuro is the chance to build offboard infrastructure where data platforms, compute services, and engineering productivity tools directly enable safer autonomy at scale. I care about rigorous systems work on hard distributed problems, and I'd welcome contributing to that mission in Mountain View.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
