

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: Computer Architecture, System Design, Machine Learning, Deep Learning, Big Data, Data Structures

Experience

- **Amazon** May 2025 – Aug 2025
Software Development Engineer Intern Seattle, US
 - Engineered high-performance backend services in **Java** (Coral, Smithy, Dagger, CBOR); tuned service execution paths and reduced backend latency by **35%** through design-pattern refactors and targeted optimization.
 - Built event-driven triage infrastructure on **AWS ECS Fargate, SQS, SNS** for a **large-scale distributed system**; diagnosed production-adjacent errors and performance bottlenecks with testers and on-call partners.
 - Developed internal tooling and a **React** console for continuous operational analysis, caching, and API performance tuning across fulfillment-center workflows.
- **CampusMesh** Jan 2026 – Present
Software Engineer New York, US
 - Developed **Python/Node.js microservices** in a **multi-service distributed platform** for real-time messaging, calls, and notifications; designed reliable data paths across **MySQL** and **DynamoDB**.
 - Deployed services on **Linux/AWS** (Lambda, API Gateway, S3) across local through production environments; enforced least-privilege **IAM** and operational monitoring for platform reliability.
- **New York University (Novel AI Technologies, Inc.)** Aug 2024 – Present
Software Developer New York, US
 - Engineered **Python** data pipelines with **concurrency control and locking** transforming **NoSQL** into **PostgreSQL**; optimized hot-path queries and ingestion throughput for analytics workloads.
 - Deployed inference and backend services on **Linux/EC2** via **Docker** for real-time wearable data processing on consumer mobile platforms.
- **PricewaterhouseCoopers (PwC)** Aug 2021 – Aug 2024
Senior Software Engineer Bengaluru, India
 - Developed a **distributed backend** on **Microsoft Azure** with asynchronous message processing; resolved production incidents across multi-service flows via logs, metrics, and traces.
 - Optimized bulk data ingestion with **parallel processing** on **100K-row** datasets, cutting transformation runtime from **5 hours to 1 hour**.

Projects

- **Advanced Expense Tracker (Concurrent Systems Application)** | *Python, Multithreading, OOP, SQLite3, Pandas*
 - Implemented **multi-threaded** transaction handling with **Python threading** and locks for thread-safe writes; applied **advanced algorithms** and **OOP design patterns** for concurrent database access.
- **InviLite (Performance-Critical Data Pipeline)** | *Python, AWS, Kinesis, Lambda, DynamoDB*
 - Built high-throughput ingestion and analysis pipelines (Kinesis, Lambda, S3, DynamoDB) with tooling for failure triage and continuous evaluation of processing performance.

Skills

- **Programming Languages:** C++, Python, Java, Go, SQL, TypeScript
- **Systems & Performance:** Distributed Systems, Concurrent Programming, Multithreading, Software Performance Tuning, Linux, Computer Architecture
- **Web & Backend:** Node.js, REST API, Microservices, React
- **Databases:** PostgreSQL, MySQL, DynamoDB, MongoDB
- **Cloud & DevOps:** AWS (Lambda, ECS, SQS, EC2, S3, CDK, DynamoDB), Docker, Kubernetes, CI/CD
- **Tools & Platforms:** Git, Cursor, GitHub Copilot, Postman, Mockito

Certifications

AWS Cloud Practitioner

Azure Data Fundamentals
