Hiring Manager

SoFi

San Francisco, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the software engineering role on your lending platform team, where I'd help ship reliable member-facing capabilities from design through deployment.

At Amazon, I owned backend delivery in **Java** using **Coral**, **Smithy**, and **Dagger**, applied established **OOP design patterns**, and backed changes with **JUnit** and **Mockito** tests. I also stood up **AWS CDK** infrastructure with **Git**-driven **CI/CD** across multiple environments, which matches the ownership, code quality, and platform discipline your team expects.

At NYU, I built a financial analytics product with **Stripe billing**, **RBAC**, and row-level security across regulated client workflows, working closely with non-engineering partners on requirements and delivery. At PwC, I contributed to a **distributed Azure** backend over **SQL Server** with event-driven processing and fault-tolerant retries. In side projects, I've used both **relational** stores and **MongoDB** document models.

My stack includes **Java**, **Python**, **TypeScript**, **React**, **Node.js**, **AWS**, **Azure**, **PostgreSQL**, **MySQL**, **DynamoDB**, **Docker**, and **Git**. **Kotlin** is the one JVM language I have not shipped in production yet, but I have strong **Java** fundamentals and have picked up new backend stacks quickly before.

What pulls me toward SoFi is the chance to build software where engineering judgment compounds because the work affects real member outcomes in lending and personal finance. I care about clear, maintainable code in regulated, cross-functional environments, and I'd welcome contributing to that platform in San Francisco.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
