Hiring Manager

Twilio

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Backend Software Engineer role at Twilio, where I'd design and build robust APIs and scalable backend systems for Segment's customer data platform.

At CampusMesh, I develop **Python/Node.js microservices** and **REST APIs** across a **distributed system** backed by **MySQL** and **DynamoDB**, with **asynchronous processing** on **AWS** (Lambda, API Gateway, S3). At Amazon, I engineered **Java** backend services with **Mockito** test coverage and shipped through **multi-stage CI/CD**, provisioning **AWS CDK** infrastructure with **Lambda**, **DynamoDB**, and API Gateway.

At NYU, I built **Python ETL pipelines** into **PostgreSQL** and **REST APIs** for a multi-tenant customer data module with **RBAC**. At PwC, I operated a **distributed Azure** backend with **asynchronous message processing**, diagnosed multi-service production incidents, and improved reliability through stronger design reviews and operational discipline.

My stack includes **Python, Java, Go, AWS, Kubernetes, Docker, PostgreSQL, DynamoDB, CI/CD, Git, Cursor**, and **GitHub Copilot**. **Kafka, Datadog, Prometheus**, and **Grafana** are areas I have not owned end-to-end in production yet, but I have built event-driven pipelines and async backends where observability and failure triage were part of daily work.

What pulls me toward Twilio is the chance to build communication and customer data infrastructure that developers and businesses depend on worldwide. I care about clear technical trade-offs, reliable managed services, and backend systems that scale cleanly, and I'd welcome contributing to that mission on your team.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
