Hiring Manager

Twitch

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the software engineering role at Twitch, where I'd build distributed applications at scale and work backwards from customer problems to drive business impact.

At CampusMesh, I ship **consumer-facing** real-time features as **TypeScript/Node.js microservices** backed by **MySQL** and **DynamoDB**, with **AWS Lambda** and API Gateway deployments across environments. I also use **Cursor** and **GitHub Copilot** daily to accelerate development, which maps closely to Twitch's modern stack and AI-assisted workflows.

At Amazon, I built an event-driven system on **AWS SQS**, **SNS**, and **ECS Fargate**, provisioned **Lambda** and **DynamoDB** via **AWS CDK**, and delivered a **React/TypeScript** internal product with cross-functional partners. My **InviLite** project used **AWS Kinesis**, **Lambda**, and **DynamoDB** for high-volume event ingestion and processing.

My stack includes **Go**, **TypeScript**, **React**, **Node.js**, **DynamoDB**, **Lambda**, **SQS**, **Kinesis**, **PostgreSQL**, and **Git**. I enjoy working on **data modeling** and **schema design** for distributed systems, and I'm excited by products where performance and reliability directly shape the live experiences communities share.

What pulls me toward Twitch is the chance to build software at the intersection of live communities, gaming culture, and global scale. I'd welcome contributing to distributed systems that help creators and viewers connect in real time.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
