Hiring Manager

Audible

Newark, NJ

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus AI work at NYU's Novel AI Technologies. I'm applying for the machine learning software engineering role at Audible, where I'd implement intelligent systems, build ML pipelines, and contribute to reliable model deployment alongside senior engineers.

At Amazon, I implemented a **RAG** pipeline with an **agentic workflow** and built supporting infrastructure on **AWS ECS**, **SQS**, and **CDK**, working through code reviews and deployment debugging with the team. That experience maps closely to building ML components, testing systems end-to-end, and shipping AI solutions in a production-minded environment.

At NYU, I implemented **PyTorch**- and **TensorFlow**-based models for health telemetry and computer vision, including **LSTM** anomaly detection and **YOLOv8/EfficientNet** image pipelines deployed on cloud inference endpoints. In research projects, I fine-tuned **RoBERTa** with custom **LoRA** in **PyTorch** and built classification workflows with **scikit-learn** and **Hugging Face**.

My stack includes **Python**, **Java**, **C++**, **PyTorch**, **TensorFlow**, **scikit-learn**, **AWS**, **Docker**, and **Git**. I have published IEEE work on deep learning classification and bring coursework in **machine learning**, **deep learning**, and **AI** from NYU, with a track record of learning new frameworks quickly under senior guidance.

What pulls me toward Audible is the chance to build intelligent systems where model quality and engineering discipline directly shape member experiences across audio and content products. I care about clean, testable ML code and collaborative delivery, and I'd welcome contributing to that team in Newark.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
