Hiring Manager

AnSCO & Associates, LLC

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Systems Developer role on your adaptive technology team, where I'd help bridge business needs and technical tools through rapid application delivery, SQL-backed analytics, and pragmatic Python tooling.

At PwC, I built internal enterprise applications on **Microsoft Azure** and **Dynamics 365 CRM**, connecting onboarding, finance, and operations workflows over **SQL Server**. I designed **SQL schemas, views, and stored procedures** structured for **Power BI** consumption, delivered embedded reporting in portals, and automated repetitive processes with **Azure Logic Apps** and **Power Automate**. When standard platform features hit their limits, I extended UI and validation behavior with **JavaScript**, **TypeScript**, and **CSS** in custom **PCF controls**, and I regularly joined tactical sessions with business stakeholders to re-prioritize work around urgent pain points.

At NYU, I developed an **insurance analytics platform** in **React** and **JavaScript** deployed on **Linux** via **Docker**, plus **Python** and **SQL** ETL jobs into **PostgreSQL** that feed reporting dashboards for operations partners. At Amazon, I shipped a **React** frontend and backend **REST APIs** on an internal console with disciplined testing and **Git**-driven **CI/CD**. I also maintain lightweight **Python** automation tooling for data ingestion and triage outside the primary web stack.

My stack includes **Python**, **SQL**, **Power BI**, **Power Automate**, **JavaScript**, **React**, **Node.js**, **Azure**, **AWS**, **Linux**, **Windows**, and **Git**. **OutSystems** and **RabbitMQ** are areas I have not shipped in production yet, though my **Power Platform** rapid-delivery background and experience bridging low-code frontends with **Python** backends and relational databases positions me to ramp quickly on your stack.

What draws me to AnSCO is the chance to solve complex business constraints with inventive, high-impact tooling in a team that values context-switching and stakeholder partnership. I enjoy translating vague requirements into working prototypes, optimizing data models for downstream reporting, and finding elegant workarounds when platforms reach their limits.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
