Hiring Manager

Blossom Health

New York, NY

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing AI work at NYU's Novel AI Technologies. I'm applying for the Software Engineer role at Blossom Health, where I'd help build an AI-native care platform that improves access to mental healthcare through reliable, patient- and clinician-facing systems.

At NYU, I architected an **NSF-funded** AI-powered **health platform** for mobile users and built **LLM-powered workflows** with **GPT-4** and **LangChain** alongside a full-stack product in **React**, **TypeScript**, and **Node.js**. That work maps closely to shipping production features that blend thoughtful software engineering with AI experiences in a regulated healthcare context.

At Amazon, I implemented a **RAG** pipeline with an **agentic workflow**, built event-driven infrastructure on **AWS ECS** and **CDK**, and focused on latency and availability in production-adjacent systems. At CampusMesh in New York, I own **LLM retrieval pipelines** and **TypeScript microservices** deployed across multiple environments with secure AWS configuration.

My stack includes **TypeScript**, **Python**, **React**, **Node.js**, **LangChain**, **FAISS**, **AWS Bedrock**, **PostgreSQL**, **Docker**, and **Git**. I have led code reviews and mentored engineers at PwC, and I am based in New York and ready to work in person five days a week.

What pulls me toward Blossom is the chance to build software where AI and engineering discipline directly expand access to mental healthcare. I care about ownership, thoughtful code review, and reliable systems that clinicians and patients can trust, and I'd welcome contributing to that mission in NYC.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
