Hiring Manager

Capgemini

United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Junior Software Developer role, where I'd help design, build, test, and maintain applications while responsibly using AI-assisted engineering tools to improve code quality and delivery.

At NYU, I developed an **insurance analytics platform** in **React** and **JavaScript** for P&C-style underwriting workflows, a broker portal with external insurer integrations, and **SQL** reporting jobs into **PostgreSQL**. I partnered with business and operations stakeholders to implement features, validate solutions against requirements, and troubleshoot defects in a regulated InsurTech domain.

At Amazon, I built a **React** frontend and backend **Java REST APIs** with **JUnit** and **Mockito** tests, participated in **code reviews**, and supported releases through **Git**-driven **CI/CD**. At PwC, I maintained **C#/.NET** applications on **Microsoft Azure** with **SQL Server**, participated in **Agile/Scrum** delivery, and shipped changes through **Azure DevOps**. I also use **Cursor** and **GitHub Copilot** daily to accelerate refactoring, documentation, and test case drafting while validating output through review and testing.

My stack includes **Java**, **JavaScript**, **React**, **C#**, **.NET**, **SQL**, **AWS**, **Azure**, **Docker**, **Git**, **Cursor**, and **GitHub Copilot**. **Angular** and **GCP** are areas I have not shipped in production yet, but my **React** web development background and cloud delivery experience on **AWS** and **Azure** give me a strong foundation to ramp quickly in a learning-focused consulting environment.

What draws me to Capgemini is the chance to grow as a developer while helping clients navigate digital transformation, including insurance and enterprise platforms where maintainable code and clear communication matter. I care about writing clean software, collaborating with analysts and testers, and adopting AI tools responsibly to deliver dependable outcomes.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
