

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: System Design, Data Structures, Machine Learning, Deep Learning, Big Data, Advanced Java

Experience

• CampusMesh

Software Engineer

Jan 2026 – Present

New York, US

- Drove development of new product features in **Node.js microservices** for real-time workflows across messaging, calls, notifications, and profile management on a fast-moving engineering team.
- Deployed scalable **serverless services** on AWS (**Lambda, API Gateway, S3, CloudFront**) across **4 environments**; enforced security with **KMS-managed keys, SSM Parameter Store**, and **least-privilege IAM**.
- Participated in code reviews and production debugging across **MySQL (Sequelize)** and **DynamoDB** backends; refactored modules to improve maintainability and deployment reliability.

• Amazon

Software Development Engineer Intern

May 2025 – Aug 2025

Seattle, US

- Contributed technical ideas during **system design** reviews for a secure internal console; implemented **OAuth, Midway SSO, and HELIS** role-based access across **4+ roles**.
- Built a **React 18** frontend and **Java REST APIs** with **unit and integration tests (Mockito)**; incorporated review feedback to improve correctness, performance, and security.
- Supported production operations on an event-driven platform (**AWS ECS Fargate, SQS, SNS**), diagnosing alerts and integration defects; provisioned **AWS CDK** infrastructure with **multi-stage CI/CD**.

• New York University (Novel AI Technologies, Inc.)

Software Developer

Aug 2024 – Present

New York, US

- Built a financial analytics platform (**React, Node.js, JavaScript, REST APIs**) with **Stripe payment flows, RBAC**, and row-level security for multi-tenant client workflows.
- Shipped broker portal features with **WebSocket** real-time updates and external partner integrations; iterated on enhancements from user feedback in a small product team.
- Engineered **Python ETL pipelines** into **PostgreSQL**; processed **250K+** records with concurrency control and supported operational monitoring dashboards.

• PricewaterhouseCoopers (PwC)

Senior Software Engineer

Aug 2021 – Aug 2024

Bengaluru, India

- Developed distributed backend services on **Microsoft Azure** with event-driven processing and fault-tolerant retries over **SQL Server**; troubleshooted production defects with senior engineers.
- Led code reviews and mentored teammates on testing and design practices, reducing production bugs by **25%**; optimized parallel batch ingestion from **100K-row** feeds from **5 hours to 1 hour**.

Projects

• InviLite (Production Reliability Platform) | Python, AWS, ECS, CloudWatch, Lambda, Kinesis

- Built ingestion and triage pipelines with **CloudWatch** monitoring; diagnosed alert-driven workflows and improved classification accuracy from **56% to 92%** through refactoring and model iteration.

• Hospital Management System (Full-Stack Application) | React, JavaScript, Node.js, Express, MongoDB, Jest

- Developed a full-stack platform with **REST APIs, role-based access control**, and **unit tests** for critical paths; documented modules for maintainable team handoff.

Skills

- **Programming Languages:** Python, Java, JavaScript (ES6), TypeScript, C++, SQL
- **Web & Backend:** React, Node.js, Express.js, REST API, Microservices, Software Development
- **Databases:** PostgreSQL, MySQL, SQL Server, DynamoDB, MongoDB
- **Cloud & DevOps:** AWS (Lambda, ECS, CDK, S3, IAM, CloudWatch), Azure, Docker, CI/CD, Git
- **Engineering Practices:** Unit Testing (JUnit, Mockito, Jest), Code Reviews, OOP, System Design
- **Tools & Platforms:** Linux, Visual Studio, Postman, Jupyter

Certifications

AWS Cloud Practitioner

Azure Data Fundamentals

Stanford Machine Learning (Coursera)
