Hiring Manager

Major League Baseball (MLB)

United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Associate Software Engineer role on the Baseball Data Platform team, where I'd help build APIs, UIs, and data services that power baseball stats and fan-facing products at scale.

At Amazon, I built a **React** frontend consuming backend **REST APIs** for an internal data console with filtering, caching, and role-based views, and engineered modular **Java microservices** with **JUnit** and **Mockito** tests. I participated in design discussions and **code reviews**, provisioned infrastructure with **AWS CDK**, and supported an event-driven platform on **ECS Fargate**, **SQS**, and **SNS** through the full development lifecycle.

At NYU, I developed an analytics platform in **React**, **TypeScript**, and **Node.js** with consistent UI patterns for operations partners, plus **Python/SQL ETL** jobs into **PostgreSQL** that processed large record volumes and fed reporting dashboards. I partnered with data science collaborators on **NLP** and model-driven features integrated into production APIs. At PwC, I built distributed services over **SQL Server**, deployed an **NLP-based OCR** pipeline, and delivered in an **Agile** environment with structured reviews and documentation.

My stack includes **React**, **TypeScript**, **Node.js**, **Java**, **SQL**, **PostgreSQL**, **AWS**, **Docker**, **Kubernetes**, **NLP**, **PyTorch**, and **Git**. **Google Cloud Platform**, **Terraform**, **Kafka**, **BigQuery**, **Spring**, and **NestJS** are areas I have not owned end-to-end in production yet, but my API, data pipeline, and cloud delivery background on **AWS** gives me a strong foundation to ramp quickly on MLB's platform stack.

What draws me to MLB is the chance to build data and software products that reach millions of fans and every team in the league. I care about clean modular code, dependable APIs, and collaborating with engineers and data scientists to ship technology that changes how baseball is consumed.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
