Hiring Manager

NetApp

United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Entry Level Software Engineer role on your Cloud Engineering team, where I'd help develop and maintain cloud-based solutions, improve automation, and partner with cross-functional teams to deliver reliable storage and data platforms.

At Amazon, I provisioned **Infrastructure-as-Code** with **AWS CDK** and **CloudFormation**, deploying API Gateway, Lambda, DynamoDB, S3, IAM, and **CloudWatch** through **multi-stage CI/CD** across regions. I integrated cloud services via backend **REST APIs**, debugged cross-service defects, and wrote **unit and integration tests** with **Mockito** while documenting API behavior and test procedures for engineering handoff.

At NYU, I deployed containerized services with **Docker** on **Linux EC2**, built **Python ETL** pipelines into **PostgreSQL**, and supported **AWS SageMaker** inference endpoints for ML workloads. At PwC, I maintained distributed services on **Microsoft Azure** over **SQL Server**, shipped changes through **Azure DevOps CI/CD**, and automated repetitive data ingestion while troubleshooting production issues with structured debugging.

My stack includes **C++**, **Python**, **Java**, **SQL**, **Linux**, **AWS**, **Azure**, **Docker**, **Kubernetes**, **MongoDB**, **DynamoDB**, **PyTorch**, and **Git**. **GCP**, **Jenkins**, **GitLab CI**, **Terraform**, and **Cassandra** are areas I have not led in production yet, but my **CDK/CloudFormation** work, multi-environment cloud deployments, and document and relational database experience give me a strong base to ramp quickly on NetApp's stack.

What draws me to NetApp is the chance to work on cloud infrastructure and data management problems at scale, where solid engineering, documentation, and automation directly improve customer outcomes. I care about identifying defects early, improving development processes, and collaborating with product, operations, and engineering partners to ship dependable cloud solutions.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
