

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: System Design, Machine Learning, Deep Learning, Big Data, Advanced Java, Data Structures

Experience

- CampusMesh** Jan 2026 – Present
Software Engineer
– Developed scalable **Node.js microservices** powering real-time academic workflows across study groups, messaging, calls, notifications, and profile management, backed by **MySQL (Sequelize)** and **DynamoDB**.
– Deployed **serverless architecture** on AWS using **Serverless Framework** with **Lambda, API Gateway, S3, and CloudFront** across **4 environments** (local, dev, staging, production); enforced security with **KMS-managed keys, SSM Parameter Store**, and **least-privilege IAM**.
– Worked on **LLM-based retrieval pipelines (RAG)** for CampusIQ (AI Assistant), leveraging **embedding-based semantic search** and structured data indexing to improve contextual accuracy by **30%**.
- Amazon** May 2025 – Aug 2025
Software Development Engineer Intern
– Architected a secure UI console for Amazon fulfillment center teams to view image/video evidence across FCs; presented **system design** for approval and established Role-Based Access (**4+ roles**) via **OAuth, Midway SSO, HELIS**.
– Provisioned **serverless Infrastructure-as-Code** using **AWS CDK** with API Gateway, Lambda, DynamoDB, S3, and IAM; reduced provisioning time **70%** with **multi-stage, multi-region CI/CD**.
– Built a **React 18** frontend with optimized API integration, advanced filtering, and client-side caching, reducing page load time by **40%**.
– Engineered the backend services in **Java** (Coral, Smithy, Dagger, CBOR); applied **low-level design patterns**, cutting backend execution time by **35%** with unit/integration testing via **Mockito**.
- New York University (Novel AI Technologies, Inc.)** Aug 2024 – Present
Software Developer
– Built across the stack (**Python, React, TypeScript, PostgreSQL, Kubernetes**) to automate healthcare workflows on an **NSF-funded** mobile health product processing real-time wearable telemetry.
– Engineered **ETL pipelines** transforming **NoSQL** into **PostgreSQL** with **concurrency control and locking**; processed **250K+** records and powered **AWS QuickSight** dashboards for clinical operations.
– Developed an end-to-end health analytics platform (**React, Node.js, REST APIs**) deployed via **Docker** on **EC2**; implemented Stripe billing, RBAC, and row-level security for biopharma-style partner workflows.
– Streamlined underwriting via a broker portal integrated with insurer platforms; implemented **document/media processing** and **WebSocket-based real-time communication**.
- PricewaterhouseCoopers (PwC)** Aug 2021 – Aug 2024
Senior Software Engineer
– Developed a distributed backend on **Microsoft Azure** for a health platform integrating with **Microsoft CRM**, with event-driven processing and fault-tolerant retries over **SQL Server** stores.
– Deployed an **NLP-based OCR neural model** on Azure to automate structured data extraction, reducing processing time by **75%**.
– Optimized data ingestion with **parallel processing** on **100K-row** Excel feeds, cutting execution from **5 hours to 1 hour**.
– Led code reviews and mentored engineers on **software design principles**, reducing production bugs by **25%**.

Projects

- Advanced Expense Tracker (Java Desktop Application)** | *Java, JavaFX, JDBC, SQLite, JFreeChart*
– Architected a modular **Java application** supporting individual and group expenses with secure login, applying **OOP principles** and **MVC & DAO design patterns** over **SQLite**.
– Implemented concurrent transaction handling and real-time cost splitting using **multithreading** and synchronized blocks for thread-safe DB updates; visualized spending trends with **JFreeChart**.
- Hospital Management System (Full-Stack Application)** | *React, Node.js, Express, MongoDB, SageMaker, Hugging Face*
– Built a **full-stack healthcare platform** (React, Node.js, Express, MongoDB) managing appointments, patient records, lab reports, and medical history with **role-based access control**.
– Fine-tuned a **Hugging Face transformer-based model** reaching **88% accuracy** for health condition prediction and deployed on **AWS SageMaker** for real-time diagnostic support.
- InviLite** | *AWS, SageMaker, Bedrock, FAISS, Python*
– Architected a cloud-native data pipeline (Kinesis, Lambda, S3, Glue, DynamoDB) ingesting structured and unstructured enterprise data into governed ML pipelines.
– Built a **RAG system** (SVM + FAISS + **Bedrock LLM**), cutting incident resolution from **1–2 hours to minutes** and lifting root-cause classification accuracy from **56% to 92%**.

Skills

- Programming Languages:** C++, Java, Python, TypeScript, JavaScript (ES6), SQL
- Web & Backend:** React, Node.js, Express.js, REST API, GraphQL API, Microservices, HTML, CSS, Sequelize
- Databases:** MySQL, PostgreSQL, DynamoDB, MongoDB, Firebase, Dataverse
- Cloud & DevOps:** AWS (CDK, EC2, S3, DynamoDB, API Gateway, Lambda, Cognito, IAM, SageMaker), Azure (OpenAI, Function Apps, Storage), Docker, Kubernetes, CI/CD
- AI/ML:** LLM Fine-tuning, RAG (LangChain, FAISS), NLP, Deep Learning, Reinforcement Learning, Hugging Face
- Tools & Platforms:** Git, Linux, Visual Studio, Cursor, GitHub Copilot, Jupyter, Postman, Power BI

Publications

Supervised ML System Based Segmentation and Classification of Stroke Using Deep Learning Techniques (*IEEE*)

An Aquila-optimized SVM Classifier for Diabetes Prediction (*IEEE*)

Certifications

AWS Cloud Practitioner

Stanford Machine Learning (Coursera)

Azure Data Fundamentals
