Hiring Manager

Optum

United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer role supporting in-house data deidentification and automation efforts, where I'd help deliver consistent privacy controls across legacy and cloud systems while improving engineering productivity with approved AI tooling.

At PwC, I worked on a regulated **healthcare** platform on **Microsoft Azure** integrated with **Dynamics 365 CRM** and **SQL Server**, tracing data flows between distributed services and documenting integration behavior for cross-functional partners. I automated repetitive ingestion and validation work, shipped changes through **Azure DevOps CI/CD**, and deployed an **NLP-based OCR** pipeline that reduced manual document handling while preserving structured audit trails.

At Amazon, I provisioned **AWS CDK** infrastructure with **multi-stage CI/CD** promotions across non-production and production regions, engineered **Java REST APIs** with **JUnit** and **Mockito** tests, and troubleshoot permission and data flows between services with role-based access controls. At NYU, I implemented **RBAC** and row-level security on a multi-tenant insurance platform, built **Python ETL** jobs into **PostgreSQL**, and partnered with product owners and QA on service requests and integration deliverables.

My stack includes **Java**, **Python**, **SQL**, **Docker**, **Kubernetes**, **AWS**, **Azure**, **Azure DevOps**, **GitHub Actions**, **Linux**, and **Git**. **GoLang**, production **Spring Boot**, **DB2**, and **Oracle** are areas I have not owned end-to-end yet, but my **Java** backend work, **SQL Server** and **PostgreSQL** experience, and **Advanced Java** coursework give me a strong foundation to ramp quickly on your stack.

What draws me to Optum is the chance to build privacy-preserving data solutions in healthcare, where careful engineering directly protects patients and partners. I care about structured documentation, automating manual work, and collaborating with developers, SMEs, and tech leads to ship dependable infrastructure in UAT and beyond.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
