Hiring Manager

Signifyd

United States

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer, Online Decisioning role, where I'd help build and operate the core API platform behind real-time scoring and order decisions for merchants.

At Amazon, I engineered backend **Java REST APIs** with **JUnit** and **Mockito** tests, presented **system design** for approval, and built a real-time event-driven platform on **AWS ECS Fargate**, **SQS**, and **SNS** with **CloudWatch** observability. I reviewed peer changes for correctness, security, and maintainability, and supported production troubleshooting on services where latency and reliability mattered at scale.

At NYU, I developed an insurance analytics platform with **REST APIs** and underwriting-style decision workflows, **SQL** pipelines into **PostgreSQL**, and real-time **WebSocket** updates for operations partners. At PwC, I designed distributed services on **Azure** over **SQL Server**, mentored teammates on architecture and testing, and refactored ingestion paths to address technical debt. In side projects, I built **Apache Spark/PySpark** scoring pipelines and an automated classification platform with monitored ingestion workflows.

My stack includes **Java**, **Python**, **SQL**, **REST/HTTP APIs**, **Apache Spark**, **GCP**, **AWS**, **Docker**, **Kubernetes**, **Linux**, **Git**, **Cursor**, and **GitHub Copilot**. **Databricks**, **gRPC**, **Cassandra**, and dedicated **Pub/Sub** ownership are areas I have not led end-to-end in production yet, but my **Spark**, cloud, and API platform work give me a strong base to ramp quickly on Signifyd's decisioning stack.

What pulls me toward Signifyd is the chance to work on backend systems where engineering quality directly affects whether legitimate customers are approved and fraud is stopped in real time. I care about scalable design, operational ownership, and partnering with product and data science teams to ship dependable solutions in a regulated commerce environment.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
