Hiring Manager

SpaceX

Hawthorne, California

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus engineering work at NYU's Novel AI Technologies. I'm applying for the Application Software Engineer role, where I'd help build reliable full-stack applications that support launch vehicle production and Starlink operations.

At Amazon, I built a **React** single-page application and **Java** backend **REST APIs** for an internal operations console, provisioned **AWS CDK** infrastructure with **multi-stage CI/CD**, and implemented an event-driven flow on **ECS Fargate** with **SQS/SNS**. I wrote **JUnit/Mockito** tests, debugged production-leaning integration issues, and contributed to architecture and code reviews with senior engineers.

At PwC, I maintained production applications on **Azure** using **C#/.NET** and **SQL Server**, shipped through **Azure DevOps CI/CD**, and troubleshooted defects in regulated workflows. At NYU and CampusMesh, I developed full-stack tools in **React**, **Python**, and **Node.js**, deployed with **Docker** and **AWS**, and iterated on prototypes based on direct user feedback.

My stack includes **Java**, **Python**, **C#**, **JavaScript**, **React**, **PostgreSQL**, **SQL Server**, **AWS**, **Docker**, **Kubernetes**, **Linux**, **Git**, and **CI/CD**. **Go**, **Scala**, **Kafka**, **Bazel**, and **Terraform** are areas I have not led in production yet, but I have shipped on similar stacks and am comfortable ramping quickly in onsite, fast-paced environments.

What draws me to SpaceX is the chance to build software where reliability and speed directly support launch cadence and Starlink service quality. I care about owning problems end to end, profiling real bottlenecks, and collaborating tightly with engineers who depend on the tools we ship.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
