Hiring Manager

Topaz Labs

Dallas, TX

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer, DevOps / Infrastructure role at Topaz Labs, where I'd help expand delivery pipelines for AI-powered image and video products, strengthen automated testing, and improve release stability alongside your engineering team.

At Amazon, I provisioned **Infrastructure-as-Code** with **AWS CDK** and ran **multi-stage CI/CD** across regions, built event-driven infrastructure on **ECS Fargate**, **SQS**, and **SNS**, and backed service changes with **Mockito** unit and integration tests. That experience maps closely to sustaining frequent product releases, diagnosing integration issues, and keeping production systems stable as model and application workloads grow.

At CampusMesh, I operate shared **AWS** services across multiple environments with **CloudFront**, **Lambda**, and **IAM** controls, partnering with application engineers on promotion workflows. In my InviLite project, I built **Python** automation for **ML pipelines** on **AWS** (Kinesis, Lambda, Glue, **SageMaker**), which aligns with distributing and supporting new ML models at scale.

My stack includes **Python**, **C++**, **JavaScript**, **AWS**, **Azure**, **Docker**, **Linux**, **Git**, and **CI/CD**. Dedicated **C++ build tooling** (Conan/Qt), **Go**, and formal **CDN/networking** ownership are areas I have not led end-to-end in production yet, but my **C++** development background, **CloudFront** deployments, and pipeline work give me a strong foundation to ramp on Topaz's desktop and ML release stack.

What pulls me toward Topaz Labs is the chance to support AI creative software where pipeline reliability directly affects how quickly new models and product updates reach customers. I care about automated testing, steady release cadence, and close collaboration with product engineering, and I'd welcome contributing in Dallas.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
