Hiring Manager

Viant Technology

Boston, Massachusetts

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Mobile Software Engineer role, where I'd help build and maintain mobile applications that power TVision's audience measurement panel while partnering with data science and engineering teams.

At NYU, I built and maintained a cross-platform **React Native** application for **iOS** and **Android** on an NSF-funded panel-style product, implementing always-on **real-time activity tracking** from wearable telemetry and integrating mobile clients with **Python** backend **REST APIs**. I implemented **AWS Cognito** authentication, **RBAC**, and consent-aware privacy controls, and tuned performance through code reviews, testing, and production debugging alongside data science partners.

At Amazon, I shipped a **React** and **TypeScript** client with **OAuth** authorization, responsive UI improvements, and **Jest** test coverage for auth and data-fetching flows. I participated in design discussions and defect triage on a console integrated with backend services. At PwC, I delivered accessible **HTML/CSS/TypeScript** UI components and mentored teammates on frontend quality standards in cross-functional delivery.

My stack includes **React Native**, **iOS**, **Android**, **JavaScript**, **TypeScript**, **HTML**, **Python**, **REST APIs**, **AWS Cognito**, **Git**, and **Jest**. Dedicated native **Swift** and **Kotlin** ownership is an area I am still deepening, but my cross-platform mobile delivery, API integration, and privacy-focused auth work give me a strong foundation to grow on TVision's stack with senior mentorship.

What pulls me toward Viant is the chance to build mobile software where measurement quality, panelist trust, and privacy standards all matter for advertising insights. I care about intuitive interfaces, reliable background tracking, and collaborating with measurement and operations teams to keep panelists engaged while protecting their data.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
