

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: System Design, Machine Learning, Deep Learning, Big Data, Data Structures

Experience

- CampusMesh

Software Engineer

Jan 2026 – Present

New York, US

- Operated shared **AWS** platform services (**Lambda**, **API Gateway**, **S3**, **CloudFront**) across **4 environments**; enforced **KMS**, **SSM Parameter Store**, and **least-privilege IAM** for secure production promotions.
 - Diagnosed configuration and integration defects across **MySQL** and **DynamoDB**-backed services; partnered with engineers on release readiness, rollback planning, and documented runbooks on **Linux**-hosted workloads.
 - Maintained **Node.js microservices** for messaging, notifications, and profile workflows with **Git**-driven CI/CD and structured logging for production triage.
- Amazon

Software Development Engineer Intern

May 2025 – Aug 2025

Seattle, US

- Provisioned **Infrastructure-as-Code** with **AWS CDK**, deploying **API Gateway**, **Lambda**, **DynamoDB**, **S3**, **IAM**, and **CloudWatch** alarms; led **multi-stage, multi-region** release promotions through **Git**-based CI/CD.
 - Supported an event-driven platform on **AWS ECS Fargate**, **SQS**, and **SNS**; improved incident response latency by **50%** via metrics, logs, and automated validation in deployment pipelines.
 - Debugged cross-service production issues and wrote **unit/integration tests** with **Mockito**; documented deployment behavior and integration contracts for operational handoff.
- New York University (Novel AI Technologies, Inc.)

Software Developer

Aug 2024 – Present

New York, US

- Engineered fault-tolerant **Python ETL pipelines** into **PostgreSQL** with concurrency control and locking; processed **250K+** records and monitored data quality through **AWS QuickSight** dashboards.
 - Deployed containerized services with **Docker** on **AWS EC2 (Linux)**; automated repetitive operational tasks and maintained runtime stability for analytics and reporting workloads.
 - Refactored pipeline modules for maintainability, added validation checks before downstream handoff, and troubleshoot ingestion failures with cross-functional partners.
- PricewaterhouseCoopers (PwC)

Senior Software Engineer

Aug 2021 – Aug 2024

Bengaluru, India

- Supported a distributed **Microsoft Azure** backend with event-driven processing and fault-tolerant retries over **SQL Server**; shipped changes through **Azure DevOps CI/CD** with integration monitoring and documented handoffs.
 - Automated bulk data ingestion with **parallel Python** processing on **100K-row** feeds, cutting execution from **5 hours to 1 hour**; triaged production defects and reduced bugs by **25%** through code reviews and stronger testing discipline.

Projects

- InviLite (Data Pipeline & Incident Automation) | Python, AWS, Kinesis, Lambda, Glue, CloudWatch, DynamoDB

- Built governed ingestion pipelines (Kinesis, Lambda, S3, Glue, DynamoDB) with **CloudWatch** logging and metrics; automated triage workflows cutting incident resolution from **1–2 hours to minutes**.
- Advanced Expense Tracker (Python Application) | Python, Pandas, SQLite3, SQL, Multithreading

- Architected a modular **Python** application with **SQL** persistence, **Pandas** transformations, and thread-safe concurrent writes; applied maintainable **OOP** and **MVC/DAO** patterns with repeatable test workflows.

Skills

- **Programming Languages:** Python, SQL, Bash, Java, JavaScript, C++
- **Data & Databases:** PostgreSQL, MySQL, SQL Server, DynamoDB, Pandas, ETL Pipelines
- **Cloud & SRE:** AWS (CDK, EC2, ECS Fargate, Lambda, S3, SQS, SNS, CloudWatch, IAM), Docker, Kubernetes, CI/CD, Linux
- **Reliability Practices:** Incident triage, observability (logs/metrics), IaC, automated deployments, documentation
- **Tools:** Git, Jupyter, Postman, Visual Studio, Cursor

Certifications

AWS Cloud Practitioner

Azure Data Fundamentals

Stanford Machine Learning (Coursera)
