

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: Data Structures, System Design, Computer Architecture, Machine Learning, Deep Learning, Big Data

Experience

- **Amazon** May 2025 – Aug 2025
Software Development Engineer Intern Seattle, US
 - Engineered performance-critical backend services in **Java** (Coral, Smithy, Dagger, CBOR); refactored execution paths and reduced service latency by **35%** with unit/integration tests via **Mockito**.
 - Integrated and validated software across **REST APIs**, event-driven workers (**ECS Fargate**, **SQS**, **SNS**), and an operations console; troubleshoot cross-service defects with testers and on-call partners.
 - Provisioned **Infrastructure-as-Code** with **AWS CDK** and supported **multi-stage CI/CD** deployments across regions for a large-scale distributed production system.
- **New York University (Novel AI Technologies, Inc.)** Aug 2024 – Present
Software Developer New York, US
 - Shipped an NSF-funded **iOS/Android** health product processing real-time wearable telemetry; integrated mobile clients with **Python** services and **REST APIs** deployed on **Linux/Docker EC2**.
 - Engineered **Python** data pipelines with **concurrency control** into **PostgreSQL**; optimized ingestion throughput and validated outputs for downstream analytics and monitoring.
 - Collaborated with data science and product partners to iterate on algorithm-driven features, document interfaces, and improve reliability across the full development lifecycle.
- **CampusMesh** Jan 2026 – Present
Software Engineer New York, US
 - Developed **Python/Node.js** services in a multi-component platform for real-time messaging and notifications; integrated components across **MySQL**, **DynamoDB**, and **AWS Lambda** with **Git**-based CI/CD.
 - Deployed services across **4 environments** on **Linux/AWS**; diagnosed integration failures and improved maintainability through code reviews and documented runbooks.
- **PricewaterhouseCoopers (PwC)** Aug 2021 – Aug 2024
Senior Software Engineer Bengaluru, India
 - Developed a distributed backend on **Microsoft Azure** with fault-tolerant retries; resolved production incidents across multi-service flows and mentored engineers on testing and software design.
 - Optimized parallel batch processing on **100K-row** datasets, cutting runtime from **5 hours to 1 hour**; participated in cross-functional delivery with product and operations stakeholders.

Projects

- **Hospital Management System (Graph Search & Planning)** | *Node.js, MongoDB, React, Graph Algorithms*
 - Implemented a **graph-based routing module** using **Dijkstra's algorithm** to match patients with the nearest available doctor; evaluated path costs on weighted graphs and improved booking efficiency by **45%**.
 - Built modular backend services with clear interfaces for integration testing and iterative refinement across presentation and data layers.
- **Advanced Expense Tracker (C++ Application)** | *C++, OOP, Multithreading, SQLite, SQL*
 - Architected a modular **C++** application with **MVC/DAO** patterns, thread-safe **SQLite** persistence, and synchronized concurrent transaction handling for reliable local state management.

Skills

- **Programming Languages:** C++, Python, Java, SQL, TypeScript, JavaScript
- **Algorithms & Systems:** Graph Search (Dijkstra), Data Structures, Concurrent Programming, Multithreading, Software Performance Tuning
- **Web & Backend:** Node.js, REST API, Microservices, React
- **Databases:** PostgreSQL, MySQL, SQLite, DynamoDB, MongoDB
- **Cloud & DevOps:** AWS (CDK, ECS Fargate, Lambda, SQS, SNS, EC2, S3), Docker, Kubernetes, CI/CD, Linux, Git
- **Tools:** Mockito, JUnit, Postman, Visual Studio, Cursor
