Hiring Manager

Affirm

San Francisco, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer role at Affirm, where I'd contribute across the product development lifecycle from scoped feature delivery through reliable operations.

At NYU, I built a customer-facing **web application** in **React** and **TypeScript** with **Node.js** backend **REST APIs**, including **Stripe** payment flows and role-based access across regulated client workflows. I partnered with product and analytics partners on requirements and trade-offs, authored **Python** data jobs into **PostgreSQL**, and debugged issues spanning UI and API layers before rollout.

At Amazon, I shipped **React** and **TypeScript** interfaces integrated with **Java** backend services, wrote tests before cloud release, and participated in peer **code reviews** on an event-driven platform provisioned with **AWS CDK**. At CampusMesh, I deliver **TypeScript** microservices on **AWS** with structured logging and phased releases, and at PwC I helped maintain enterprise web systems with disciplined review and mentoring practices.

My stack includes **JavaScript**, **TypeScript**, **React**, **Python**, **Java**, **Node.js**, **REST APIs**, **PostgreSQL**, **AWS**, **Docker**, and **Git**. **Vue** and **Kotlin** are areas I have not shipped in production yet, but my declarative UI work in **React** and backend delivery in **Java** and **Python** give me a strong base to ramp quickly on Affirm's stack.

What pulls me toward Affirm is the chance to build software where engineering quality directly shapes how people access credit and manage purchases. I care about clear, well-tested code in cross-functional teams, and I'd welcome contributing to that mission from Brooklyn.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
