Hiring Manager

Aurora

Pittsburgh, Pennsylvania

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus engineering work at NYU's Novel AI Technologies. I'm applying for the Security Software Engineer II role, where I'd help design and build security components for secure communication across onboard and cloud systems on Aurora's autonomous vehicle platform.

At Amazon, I worked on a secure internal console with **OAuth**, **Midway SSO**, and **role-based access control**, and presented access-control design for review before rollout. I engineered backend **REST APIs** with **unit and integration tests**, provisioned least-privilege **IAM** through **AWS CDK**, and participated in code reviews focused on reliability and safe service integration.

At CampusMesh, I enforced secure AWS deployments using **KMS**, **SSM Parameter Store**, and least-privilege **IAM** across multiple environments on **Linux**. At NYU, I shipped multi-tenant software with **RBAC** and row-level security. In projects, I built a modular **C++** application with **STL**, multithreading, and thread-safe persistence, plus API tests around authentication paths on a full-stack platform.

My stack includes **C++**, **Python**, **Java**, **Go**, **Linux**, **AWS**, **Docker**, **Git**, and **unit/integration testing**. Production **Golang**, dedicated **threat modeling**, and autonomous-vehicle-specific security frameworks are areas I have not led in yet, but my secure-service delivery background and **C++** systems work give me a strong base to ramp with partner teams on architecture reviews.

What draws me to Aurora is the chance to build security into autonomy software where safe onboard-to-cloud communication has real-world consequences. I care about careful design review, high-quality tests, and collaborating with engineers across software, hardware, and services.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
