Hiring Manager

Brain Corp

San Diego, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer II role, where I'd help build scalable cloud infrastructure and services that connect BrainOS platforms with web and robotic applications.

At Amazon, I provisioned cloud infrastructure with **Infrastructure as Code** using **AWS CDK** on **ECS Fargate** and **Lambda**, built an **event-driven architecture** with **SQS/SNS**, and shipped **RESTful APIs** through **multi-stage CI/CD pipelines** with monitoring and automated tests. That work maps closely to maintaining reliable cloud platforms with strong performance and operational visibility.

At NYU, I engineered **Python/SQL data pipelines** into **PostgreSQL**, deployed **ML inference services** with **Docker** on **AWS EC2**, and built **TypeScript/Node.js REST APIs** connecting web applications to cloud-backed analytics and model endpoints. At CampusMesh, I maintain **AWS** services across **4 environments** with **Kubernetes**-style releases, and at PwC I delivered distributed cloud workloads on **Azure** through disciplined **CI/CD** and code reviews.

My stack includes **Python**, **TypeScript**, **Go**, **RESTful APIs**, **Docker**, **Kubernetes**, **data pipelines**, **ML inference services**, **Kafka**, **event-driven architectures**, **GCP**, and **Git**. **Pulumi** and dedicated **BrainOS GCP** production ownership are areas I have not led end-to-end yet, but my **IaC**, container orchestration, and applied ML platform work give me a strong base to ramp quickly on Brain Corp's cloud stack.

What pulls me toward Brain Corp is the chance to build cloud software where reliability and data quality directly support autonomous robotics in real-world environments. I care about proactive debugging, cross-team collaboration, and continuous improvement across the software development lifecycle, and I'd welcome contributing to that mission in San Diego.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
