Hiring Manager

Esri

Redlands, California

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus engineering work at NYU's Novel AI Technologies. I'm applying for the Software Engineer role, where I'd help develop, enhance, and maintain C/C++ software frameworks with a focus on robust design, debugging, and performance across Windows-based systems.

At PwC, I developed and maintained production software on **Microsoft Azure** and **Windows**, using **Visual Studio** debugging tools to diagnose defects and ship fixes through **Azure DevOps CI/CD**. I improved batch ingestion **performance** with **parallel processing** and **concurrency**, led code reviews, and mentored engineers on testing discipline and maintainable design in a team environment.

At Amazon, I engineered backend **Java** services alongside senior engineers, wrote **unit and integration tests** with **Mockito**, and applied targeted **performance analysis** that reduced backend execution time materially. In projects, I built a modular **C++** application on **Windows** with **STL**, **multithreading**, and thread-safe **SQLite** persistence, using debugger and profiler workflows to resolve memory and concurrency issues. I also delivered synchronized **JDBC** updates and **JUnit** tests in a Java desktop application.

My stack includes **C++**, **C**, **Java**, **Python**, **Windows**, **Linux**, **Visual Studio**, **Git**, **software testing patterns**, and **computer security fundamentals**. **C#**, **WPF**, **WinForms**, **COM**, **IPC**, and **x64/ARM assembly** are areas I have not shipped in production yet, but my **C++** framework work, **Windows** development background, and systems coursework give me a strong base to ramp with senior engineers on Esri's platform.

What draws me to Esri is the chance to work on long-lived C/C++ software where operating system concepts, security-minded design, and careful debugging directly affect product reliability for mapping and spatial analytics users worldwide. I care about learning from senior engineers, staying current on software architecture, and contributing features that are well tested and maintainable.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
