Hiring Manager

GlossGenius

New York, New York

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing engineering work at NYU's Novel AI Technologies and CampusMesh. I'm applying for the Software Engineer role, where I'd help build large-scale web and mobile experiences, ship customer-facing AI features, and improve the microservices platform that powers beauty and wellness businesses.

At NYU, I developed a SaaS-style **web application** in **React** and **TypeScript** that helps small businesses run day-to-day operations, including **Stripe** payments, team workflows, and multi-tenant controls across live clients. I also built a **React Native** app for **iOS** and **Android** integrated with **PostgreSQL** and backend **REST APIs**, and integrated **LLM**-powered features where they clearly improved user workflows.

At CampusMesh, I ship **microservices** on **AWS** and production **AI features** through **LLM RAG** pipelines that improved assistant quality materially. At Amazon, I delivered **React** UI components on top of **Java** backend services, built a **RAG**-based operational tool for real users, and supported releases through **AWS CDK** and **ECS** with strong testing discipline.

My stack includes **TypeScript**, **JavaScript**, **React**, **Redux**, **React Native**, **PostgreSQL**, **AWS**, **Kubernetes**, **Terraform**, **Protocol Buffers**, **LLMs**, and **microservices**. **Kotlin**, **Ruby on Rails**, **gRPC**, and **Micronaut** are areas I have not shipped in production yet, but my full-stack SaaS delivery background and shipped AI integrations give me a strong base to ramp quickly on GlossGenius's stack.

What draws me to GlossGenius is the chance to build software that directly helps entrepreneurs grow their businesses, from friction-free payments to tools that save time every day. I like owning features end-to-end, moving fast with good judgment, and collaborating closely with product and design to ship work that users feel in the real world.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
