

## Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: Computer Architecture, System Design, Data Structures, Machine Learning, Big Data

## Experience

- **Amazon** May 2025 – Aug 2025  
Software Development Engineer Intern Seattle, US
  - Developed production software for fulfillment-center operations teams to review image and video evidence from physical sites; partnered with senior engineers to break down features, identify integration risks, and ship modular backend services with clear interfaces.
  - Built automated **unit and integration tests** with **Mockito** and integrated them into **multi-stage CI/CD** pipelines provisioned via **AWS CDK**; reproduced cross-service defects and resolved issues before regional rollout.
  - Engineered backend services with **REST APIs** and structured serialization (**CBOR**); participated in peer **code reviews** and documented service behavior for maintainability in a mission-critical operations environment.
- **New York University (Novel AI Technologies, Inc.)** Aug 2024 – Present  
Software Engineer New York, US
  - Built **Python** services bridging real-time wearable sensor streams into cloud analytics for an NSF-funded life-sciences platform; troubleshooted data-quality and timing issues across ingestion, processing, and deployment layers.
  - Developed production **Python ETL pipelines** with concurrency controls into **PostgreSQL**; validated outputs through automated checks before powering operational dashboards used by research and product partners.
  - Deployed containerized services with **Docker** on **Linux/EC2**; collaborated cross-functionally to refine machine-facing workflows and ship documented **REST API** integrations for regulated client environments.
- **CampusMesh** Jan 2026 – Present  
Software Engineer New York, US
  - Developed **Python/Node.js** microservices and backend **REST APIs** on **AWS** across **4 environments**; troubleshooted production integration defects and maintained software health through **Git**-based reviews and staged releases.
  - Improved observability with structured logging and environment promotion controls; documented deployment runbooks for cross-team handoffs in a fast-paced startup-style delivery cadence.
- **PricewaterhouseCoopers (PwC)** Aug 2021 – Aug 2024  
Senior Software Engineer Bengaluru, India
  - Delivered production services on **Microsoft Azure** with event-driven processing over **SQL Server**; diagnosed multi-service production incidents via logs and metrics and led **code reviews** to improve modular design and test coverage.

## Projects

- **Advanced Expense Tracker (Python Application)** | *Python, OOP, MVC, unittest, SQLite, Multithreading*
  - Architected a modular **Python** application with **MVC/DAO** separation, secure login, and thread-safe **SQLite** persistence; wrote **unittest** suites and synchronized blocks for concurrent transaction handling.
- **InviLite (Automated Validation Pipeline)** | *Python, AWS, Lambda, S3, unittest, REST APIs*
  - Built a governed **Python** ingestion and evaluation pipeline on **AWS** with repeatable test workflows; automated validation checks before promoting model outputs to downstream operational consumers.

## Skills

- **Programming Languages:** Python, Java, C++, JavaScript, SQL
- **Software Engineering:** Software Engineering Fundamentals, Modular Design, OOP, Data Structures, Algorithms
- **Quality & Delivery:** Git, CI/CD, Unit Testing, Integration Testing, Mockito, unittest, Code Review
- **Systems & Backend:** REST APIs, Linux, Docker, Microservices, Concurrency, Debugging
- **Cloud & Databases:** AWS (CDK, Lambda, ECS, S3, API Gateway), PostgreSQL, MySQL, DynamoDB

## Certifications

AWS Cloud Practitioner

Stanford Machine Learning (Coursera)

Azure Data Fundamentals
