Hiring Manager

Runpod

San Francisco, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer role at Runpod, where I'd help build full-stack platform features that make GPU infrastructure easier for AI engineers and researchers to use.

At NYU, I developed a full-stack **web platform** in **React**, **TypeScript**, **HTML/CSS**, and **Node.js/Express** with **REST APIs** deployed via **Docker** on **AWS EC2**. I also built **Python** data services and documented API behavior for cross-team integration, which maps closely to maintaining intuitive developer-facing platform components.

At Amazon, I shipped **React** and **TypeScript** UI integrated with backend services, wrote tests before **CI/CD** rollout, and participated in code reviews on production platform code. At CampusMesh, I deliver **TypeScript/Node.js** services on **AWS** and support AI-adjacent workflows with structured logging and clear integration docs for engineering partners.

My stack includes **Python**, **TypeScript**, **JavaScript**, **React**, **Express**, **Pydantic**, **Go**, **Docker**, **AWS**, and **Git**. **FastAPI** and formal **open-source SDK** ownership are areas I have not led in production yet, but my full-stack delivery, public **GitHub** project work, and platform API experience give me a strong base to ramp quickly on Runpod's stack.

What pulls me toward Runpod is the chance to build software that directly improves how AI developers ship workloads on GPU infrastructure. I care about clean, tested code, learning from feedback in reviews, and collaborating across engineering and AI teams in a fast-moving environment.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
