

Education

New York University, New York, NY

Aug 2024 – May 2026

Master of Science in Computer Engineering (GPA: 3.9/4.0)

Coursework: Computer Architecture, System Design, Data Structures, Machine Learning, Big Data

Experience

- Amazon

Software Development Engineer Intern

May 2025 – Aug 2025

Seattle, US

– Provisioned compute infrastructure with **AWS CDK** on **ECS Fargate containers** across multi-stage environments; built an **event-driven** control path with **SQS/SNS** and backend **REST APIs** for operational configuration workflows.

– Monitored service health with structured logging and automated tests; diagnosed cross-service defects and shipped fixes through **CI/CD** pipelines before regional production rollout.

– Engineered backend services in **Java** with serialization and clear module boundaries; participated in code reviews focused on reliability, performance, and maintainable systems design.
- CampusMesh

Software Engineer

Jan 2026 – Present

New York, US

– Deployed serverless and **containerized** services on **AWS (Lambda, API Gateway, S3)** across **4 environments** with consistent configuration patterns and environment-specific networking and access controls on **Linux** hosts.

– Built backend **REST APIs** that let users configure workflows and integrations; troubleshooted production issues via logs and metrics and documented deployment runbooks for repeatable node rollout.
- New York University (Novel AI Technologies, Inc.)

Software Developer

Aug 2024 – Present

New York, US

– Deployed services with **Docker** on **Linux/AWS EC2**; implemented **concurrency control**, locking, and thread-safe database writes for data-intensive pipelines into **PostgreSQL**.

– Maintained runtime stability for a multi-tenant platform; validated configuration changes and access boundaries before promoting releases to production users.
- PricewaterhouseCoopers (PwC)

Senior Software Engineer

Aug 2021 – Aug 2024

Bengaluru, India

– Improved batch ingestion with **parallel processing** and **multithreading** on large datasets; diagnosed production incidents across distributed **Azure** services and shipped fixes through **CI/CD**.

Projects

- Advanced Expense Tracker (C Systems Application) | C, C++, Multithreading, SQLite, Visual Studio

– Built a modular **C/C++** application with **multithreading**, synchronized blocks, and thread-safe **SQLite** persistence; debugged memory and concurrency defects with profiler and debugger tooling.
- Pipeline Simulator (Computer Architecture Coursework) | C, Assembly Concepts, Computer Architecture

– Modeled register, memory, and pipeline behavior in a **Computer Architecture** project; generated per-cycle dumps and validated instruction execution across assembly test cases.

Skills

- **Programming Languages:** C, C++, Python, Java, JavaScript, SQL
- **Systems & OS:** System Calls, Linux File Descriptors, Multithreading, Event Loops, Computer Architecture, Concurrency
- **Infrastructure:** Containers, Docker, AWS (ECS, EC2, Lambda, API Gateway, CDK), Linux, CI/CD
- **APIs & Backend:** REST APIs, Microservices, Node.js, Event-Driven Architecture
- **Engineering:** Git, Debugging, Performance Analysis, Unit Testing, Code Review

Certifications

AWS Cloud Practitioner

Azure Data Fundamentals

Stanford Machine Learning (Coursera)
